

CUSTOM- TAILORED PaaS for Pimcore

METAWAYS >

Personal, flexible, customized

Metaways has been an official technology partner of Pimcore since 2021. Based on our experience, we have customized Pimcore PaaS offerings for numerous scenarios: From a highly available setup for operation as a PIM and DAM to use as a CMS for the new global corporate website including content delivery strategy to an automatically scalable online store for an outstanding customer experience.

The flexibility goes beyond Pimcore, you also have a lot of freedom with other services. Whether, for example, modern front-end architectures for improved interaction capability, middleware functionality for data exchange or messaging brokers for the distribution of messages, Metaways stands for custom-tailored PaaS.

You can even decide on the hosting location: In one of our ISO27001-certified data centers in Hamburg, in the Amazon Web Services cloud or on-premises in your company. We won't leave you on your own and take responsibility for the managed services everywhere.

Your key benefits at a glance:

- + Flexibility in the choice of technical operating concept - classic virtualization, managed Kubernetes, hybrid models
- + Market leader partnerships for selected external managed services such as global CDN, web security and page speed optimization
- + 24/7 monitoring of the platform and services including proactive intervention in the event of an alarm
- + Update management for all services managed by Metaways
- + Service management - RACI matrix operation, SLA reporting, elasticity planning, update and change management coordination
- + Customer-specific ticket queue with individual group of participants for the operation project (e.g. customer, agency(ies), Metaways)
- + Personal contacts for technical platform support and service management, in German and English

With our custom-tailored PaaS, we create space – for you and your digital strategy.

Contact We are looking forward to get to know you and your project.
